RMP Opportunity Gap - Merchandise Lines

Lansdowne Retail Trade Areas

Nielsen's RMP data is derived from two major sources of information. The demand data is derived from the Consumer Expenditure Survey (CE Survey, or CEX), which is fielded by the U.S. Bureau of Labor Statistics (BLS). The supply data is derived from the Census of Retail Trade (CRT), which is made available by the U.S. Census. Additional data sources are incorporated to create both supply and demand estimates.

The difference between demand and supply represents the opportunity gap or surplus available for each merchandise line in the specified reporting geography. When this difference is positive (demand is greater than the supply), there is an opportunity gap for that merchandise line; when the difference is negative (supply is greater than demand), there is a surplus.
